What's new with Wi-Fi 7?

Along with a massive boost to speed, Wi-Fi 7 also introduces 320 MHz ultra-wide bandwidth, 4096-QAM, Multi-RU, and Multi-Link Operation, which all together make your wireless experience more reliable and efficient than ever before.

What's the difference between Wi-Fi 5, Wi-Fi 6 and Wi-Fi 7?

Wi-Fi 5 provided a sizeable jump in wireless throughput. And although Wi-Fi 6 provided 37% faster speeds, it was designed with efficiency improvements in mind.

Wi-Fi 7 brings a generation of higher throughput - 480% more than previous generations. A Wi-Fi 7 router, for example, will open up your entire home to the latest online experiences thanks to backwards compatibility.
