

## TP-Link TL-SF1009P tīkla pārslēgs Nepārvaldīts Fast Ethernet (10/100) Power over Ethernet (PoE) Melns

**Zīmols :** TP-Link

**Preces kods:** TL-SF1009P

**Modeļa nosaukums :** TL-SF1009P

TP-Link TL-SF1009P. Slēdža tips: Nepārvaldīts. Basic switching RJ-45 Ethernet portu veids: Fast Ethernet (10/100), Basic switching RJ-45 Ethernet portu daudzums: 9. Pilns duplexss. Adrešu tabulas izmērs: 2000 ieraksti, Komutācijas ietilpība: 1,6 Gbit/s. Tīkla standarts: IEEE 802.3af, IEEE 802.3at, IEEE 802.3i, IEEE 802.3u, IEEE 802.3x. DC ievades spriegums: 53.5 V. Saspraudnis: DC-līgza. Power over Ethernet (PoE). Pie sienas piestiprināms

| Vadības īpašības                                |                                                                   | Energijas pārvaldība                            |              |
|-------------------------------------------------|-------------------------------------------------------------------|-------------------------------------------------|--------------|
| Slēdža tips *                                   | Nepārvaldīts                                                      | Mainstrāvas ievades frekvence                   | 50 Hz        |
| Savienojamība                                   |                                                                   | DC ievades spriegums                            | 53.5 V       |
| Basic switching RJ-45 Ethernet portu daudzums * | 9                                                                 | Ieejas strāva                                   | 1.31 A       |
| Basic switching RJ-45 Ethernet portu veids *    | Fast Ethernet (10/100)                                            | Strāvas patēriņš (maks)                         | 77,08 W      |
| Fast Ethernet (kapara) portu skaits             | 9                                                                 | Power over Ethernet (PoE)                       |              |
| Saspraudnis                                     | DC-līgza                                                          | Power over Ethernet (PoE) *                     | ✓            |
| Tīklošana                                       |                                                                   | Power over Ethernet (PoE+) pieslēgvietu skaits  | 8            |
| Tīkla standarts *                               | IEEE 802.3af, IEEE 802.3at, IEEE 802.3i, IEEE 802.3u, IEEE 802.3x | Power over Ethernet (PoE) jauda uz pieslēgvietu | 30 W         |
| 10G atbalsta *                                  | ✗                                                                 | Kopējais Power over Ethernet (PoE) budžets      | 65 W         |
| Vara Ethernet kabeļu tehnoloģija                | 10BASE-T, 100BASE-TX                                              | Ārējās vides apstākļi                           |              |
| Kabeļu tipi, kas ir atbalstīti                  | Cat3, Cat4, Cat5, Cat5e                                           | Darbības temperatūras amplitūda (T-T)           | 0 - 40 °C    |
| Pilns duplexss                                  | ✓                                                                 | Uzglabāšanas temperatūras amplitūda (T-T)       | -40 - 70 °C  |
| Pusduplexss                                     | ✓                                                                 | Darbības relatīvā mitruma amplitūda             | 10 - 90%     |
| Plūsmas kontroles atbalsts                      | ✓                                                                 | Uzglabāšanas relatīvā mitruma amplitūda         | 5 - 90%      |
| Auto MDI/MDI-X                                  | ✓                                                                 | Karstuma izkliedēšana                           | 262,84 BTU/h |
| Automātiska vienošanās                          | ✓                                                                 | Svars & dimensijas                              |              |
| Atbalsta MAC address auto-learning              | ✓                                                                 | Platums                                         | 171 mm       |
| Atbalsta MAC address auto-aging                 | ✓                                                                 | Dziļums                                         | 98 mm        |
| Datu pārraide                                   |                                                                   | Augstums                                        | 27 mm        |
| Komutācijas ietilpība *                         | 1,6 Gbit/s                                                        | Iepakojuma saturs                               |              |
| Pakešu apstrādes jauda                          | 1,3392 miljons pakešu sekundē                                     | Lietotāja pamācība                              | ✓            |
| Adrešu tabulas izmērs *                         | 2000 ieraksti                                                     |                                                 |              |
| Uzglabāt un pārsūtīt                            | ✓                                                                 |                                                 |              |
